
ECO digital manometer

The ECO1 digital pressure gauge is based on a piezo-resistive transducer, controlled by a high accuracy microprocessor which read the given values and make the correspondent operations.

The pressure is measured twice a second and displayed. The upper display indicates the actual pressure while the lower one displays the maximum and minimum values performed since last reset.

This pressure gauge has two buttons: the one on the right switches the manometer on, (on/off function). Once switched on, if the button is pressed and maintains pressed, different functions are displayed. The actual function will be performed when released. The button on the left is only used to switch the maximum and minimum values performed. ECO1 is an economic version of the LEO2 model.

Technical data:

Power supply:	Button battery CR2430 3V. (life service approx. 1000 hours)
Features:	On/off, Reset, zero adjustment and auto switch-off.
Process conn.:	1/4"BSP-male.
Case:	Plastic, with rubber protector. Protection degree P-65.
Ranges:	-1+30 bar (resolution. 0,01 bar) 0-300 bar (resolution. 0,1 bar)
Accuracy:	±0,5% f.s. typical. (±1,0% f.s. maximum.).
Temperature service:	0...50°C.
Weight:	125 grams.
Dimensions:	Diameter 59 mm. + height 95 mm. x width 32 mm.
